WHISKY AUTHENTICATOR

The SAD portable WHISKY AUTHENTICATOR enables the easy identification of counterfeit products without the need to take a sample to an analytical laboratory

The WHISKY AUTHENTICATOR is a miniaturised battery operated Ultra Violet spectrophotometer equivalent in specification and performance to much larger laboratory bench instruments. Ultra Violet spectroscopy provides an excellent method of identifying counterfeit product which usually has a significantly different spectrum from the genuine products as can be seen below in the curve F which has an unusual peak at about 280 nm.

The AUTHENTICATOR can also be used with rums and brandies as well as Scotch whisky, Irish whiskey and Bourbon.
